Pearls	Pitfalls
Position the fluoroscopy machine ahead of time. Placing the bow superiorly with the x-ray beam anterior to the patient's shoulder facilitates easy use throughout the case without limiting exposure	Failing to obtain preoperative advanced imaging can lead to overlooking concomitant injuries, such as rotator cuff tears or secondary fracture patterns
Carefully and thoroughly debride the fracture site of any interposed soft tissue and/or callus	Inadequate fracture debridement can prohibit anatomic reduction
Hold the fracture fragment in place with a grasper while positioning the lateral row suture anchors	Relying on arthroscopic visualization without the addition of fluoroscopy may lead to malreduction
